

PROFESSIONAL SUMMARY

Senior software engineer with 10+ years shipping production software, frontend-leaning and comfortable across the stack. Eleven years of TypeScript, ten of React. I turn fragmented codebases into standards other teams build on: at Corivo I consolidated a fragmented frontend into a modular cross-brand codebase and drove a Temporal-first date and time standard other applications depended on, and there and at Men&Mice I led design-token standardization into production-grade component and utility APIs. I've worked at real scale, from a Gartner top-4-rated network infrastructure platform used by Fortune 500 enterprises and governments to six client platforms serving millions of learners. I publish six npm packages in public, and every project I've built since February runs on shared AI workflows I maintain, with linting, type-checking and tests gating my commits and anything an agent produced.

TOP SKILLS

Frontend	Backend & Data	Delivery & AI-Assisted Engineering
TypeScript (11 years)	Node.js (4 years) / Express / NestJS (current)	Code review & mentoring
React (10 years)	PostgreSQL (3 years) / Prisma / Neon	Testing (Vitest, Playwright, Cypress)
Next.js (4 years)	MongoDB (2 years)	CI/CD (GitHub Actions)
Vue (2 years) / Nuxt (current)	Python (1+ years) / FastAPI (current)	Docker
Angular (2 years)	AWS (2 years, DVA-C02 in progress)	Nx / Turborepo monorepos
Accessibility (WCAG 2.2 AAA)	REST / GraphQL	Claude Code (daily driver)
Tailwind / Chakra / Shadcn / SCSS	C#/.NET (endpoint contributions)	Repo-level agent instructions
SvelteKit / Astro / Octane (all current)	Vercel / Cloudflare	Agent skills & subagents
Design systems & design tokens	Bun / pnpm / npm	Local LLMs
Component libraries & Storybook		Human and agent guardrails (lint, typecheck, format, test as CI and agent-loop gates)
TanStack (Query, Table, Virtual, Router)		

PROFESSIONAL EXPERIENCE

NorthGuild · Independent Open-Source Engineering

Open-Source Engineer (independent)

Remote
Feb 2026 – Present

- Six published npm packages under the @northguild scope, where the public API contract, semantic versioning and documentation are the product.
- @northguild/gmt: a Temporal-first date and time library with a strings-in, strict-types-out API and over 300,000 tests across 20 timezones. Ships companion lint packages for oxlint, ESLint and Biome, in an Nx and pnpm monorepo. Currently extending it into high-precision datetime calculation for health, finance, aerospace, IoT, transport and space use cases.
- Dox: an AI documentation assistant I built and launched on the GMT docs site, trained on the library's own docs so users can ask how to get started and get any question answered directly.
- @northguild/worktree: a CLI that wraps the daily Git worktree flow into single actions for branch creation, environment file copying, editor opening and cleanup, with GitHub and Jira integration to derive branch names from issues. Ships an embedded documentation assistant.
- Building an open-source AI toolkit for flexible, standardized AI workflows, designed to stay coding-standards agnostic: a project points at its own standards repo when it initializes, so teams keep their conventions and still share one workflow.
- Every project since February runs on shared AI workflows I maintain: repo-level agent instructions, skills and subagents for research, test-driven development, code review and commit messages, with linting, formatting, type-checking and tests running as gates in CI and in the agent loop.

Corivo (acquired by Travel Connect)

Senior Software Engineer

Reykjavik, Iceland (Remote from Finland)
May 2023 – May 2026

- Core engineer on a 4-8 person distributed team owning several microservices on a high-traffic, multi-tenant travel platform (React, Next.js, TypeScript, Tailwind).
- Consolidated a fragmented legacy frontend into a modular cross-brand codebase and modernized it onto a new stack. My own architectural call, owned start to finish.
- Built the company-wide component and utility libraries, and led design-token standardization into production-grade component APIs used across the platform's applications.
- Drove a Temporal-first standard for date and time handling, built as an internal package other applications depended on, ending a recurring class of timezone bugs on global bookings. It became the foundation for GMT.
- Built the EN/CN localization framework and cross-app theming that every application on the platform ran on, supporting expansion into North Atlantic and Asian markets.
- Shipped the flagship customer-facing application from concept to production in four months.
- Integrated Flywire payments into the customer-facing applications: built the functionality and the UI, with unit and integration tests.
- Set the quality bar: unit-test coverage (Vitest), Playwright end to end, CI-enforced checks on every merge, and code review standards with the junior engineers I mentored.
- Worked with PostgreSQL across migrations, QA and environment setup, and contributed C#/.NET endpoints.

Men&Mice (acquired by BlueCat)

Frontend Engineer, DDI Infrastructure

Reykjavik, Iceland (Remote from Finland)

Jun 2021 – Apr 2023

- Core engineer on the UI of Micetro, a Gartner top-4-rated DDI platform (DNS/DHCP/IPAM) used by Fortune 500 enterprises, universities and governments, managing networks spanning millions of IP addresses.
- Led the design-token standardization effort, working directly with the design team from Figma libraries and plugins into a token-based, production-grade component API, and unified legacy components into a WCAG-compliant design system.
- Used TanStack Query for the data layer behind views holding tens of thousands of DNS and DHCP records across Azure, AWS, hybrid and on-premise environments.
- Delivered a timezone and audit-log overhaul, and the licensing flows for the shift from perpetual to subscription.

Unicon, Inc.

UX Developer (Frontend Engineer)

Phoenix, Arizona, USA (Remote)

May 2017 – May 2021

- Took 6 client platforms from zero to production on teams of 2-12 for US public-sector and EdTech clients, including Cisco Networking Academy and Scholastic Literacy Pro, serving millions of learners.
- Built React (MobX for state management) and Vue applications with MERN-stack services and AWS serverless microservices (Lambda, S3, Cognito, API Gateway).
- Built component libraries and Storybook across those platforms; shipped WCAG 2.0 AAA-compliant interfaces with 90%+ unit-test coverage across desktop and mobile browsers.
- Ran technical audits and due diligence on client codebases, giving the deciding call on scale versus refactor.

Centuri Group, Inc.

Application Developer (Enterprise Mobile & Web)

Phoenix, Arizona, USA

Feb 2016 – May 2017

- Built 8+ enterprise mobile and web apps on a 6-8 person team for North America's largest utility-infrastructure contractor, digitizing field workflows for natural gas pipeline crews with offline-first functionality.
- Led an AngularJS-to-Angular migration on a live product while it kept running for customers, and an ES6/Flexbox modernization of the core web UI.

EARLIER EXPERIENCE

Co-Founder / Product Owner, Minted Sky Studios (2011-2021): built and monetized DriversTest.info from zero to a high-traffic civic learning tool, run on MySQL in production for a decade · Technical Instructor, Shanghai Jiao Tong University (2012-2016): created the Intro to Web Development track and founded CoderDojoXL · Mandarin Linguist, U.S. Department of Defense (2006-2009).

VOLUNTEER & LEADERSHIP

Chairman (Puheenjohtaja), Suomen Paluumuuttajayhdistys ry, the Finnish Remigration Association, 2025-present. Built and maintain the community's digital ecosystem, and co-lead advocacy with Members of Parliament and national organizations.

CERTIFICATIONS & CONTINUOUS LEARNING
